

AI INFRASTRUCTURE · AGGASYS SOLUTIONS

How to build a production-ready AI infrastructure in 6 steps.

**(Most businesses only complete
one.)**

Here's the complete stack — **every layer explained in plain
English.**

AGGASYS SOLUTIONS

swipe to see all 6 →

STEP 01 · AI AT THE DESK

HP Omnibook 7

AI PC

A laptop with a built-in NPU — a dedicated chip that runs AI tasks locally, without sending data to the cloud.

No cloud round-trip. No latency. No per-query cost.

AI infrastructure doesn't start in the server room.

It starts at every desk in your business.

Dell Pro Max T2

Tower Workstation

A high-performance desktop workstation for AI model development, training, and local inference — no data centre required.

Your engineers aren't slow. **Their hardware is.**

On-premise training means no cloud dependency and no bill that scales against you.

On-premise AI development means your data never leaves your building.

STEP 03 · DATA CENTRE COMPUTE

Dell PowerEdge

R760XD2

A dual-socket 2U rack server with high-density storage bays — built to run production AI and analytics workloads at scale.

Production AI doesn't forgive under-specced hardware.

Certified, deployed, and supported — not just sold.

99.9%

uptime across 1,000+ Aggasys deployments

STEP 04 · DATA STORAGE

Dell PowerVault ME5024

A 24-bay enterprise storage array built for large AI datasets and mixed workloads — scales as your data grows.

Your AI models are only as good as the data feeding them.

Get storage wrong and it becomes the bottleneck that limits everything above it.

STEP 05 · NETWORK BACKBONE

Cisco Catalyst 9300L

A stackable enterprise network switch that connects every device in your infrastructure with high-throughput intelligent uplinks.

You can have the best AI server in Singapore.

A slow network makes it irrelevant.

The fabric every other step runs on.

STEP 06 · ALWAYS-ON POWER

APC Smart-UPS 3000VA

A 3,000VA uninterruptible power supply (UPS) with automatic voltage regulation — keeps your infrastructure running during power failures.

The step most businesses skip.

Until AI training data disappears at 3am.

Power fails. Everything above this layer fails with it.

This is the one step that protects all the others.

FREE ASSESSMENT

Which of the 6 steps is your stack missing?

Comment **"ASSESS"** below and a senior Aggasys engineer will DM you a personalised AI infrastructure gap analysis.

No sales pitch. No obligation. Just an honest answer.
